

UNDERWRITING APPROVAL & DELEGATION MATRIX

Credit Underwriter AI | Enterprise Portfolio Knowledge Base

Document ID	CUAI-AM-001
Version	1.0
Classification	Internal Use Only
Effective Date	01 August 2026
Owner	Credit Governance
Review Cycle	Annual or on material change

1. Purpose

Define decision authority, escalation levels, exception handling and segregation of duties for automated and human underwriting decisions.

2. Scope

This fictional internal policy is designed for the Credit Underwriter AI portfolio project. It supports automated underwriting, human review, auditability and policy-aware AI explanations. It is not a policy of any real financial institution.

3. Approval Authority

Level	Role	Illustrative Authority	Typical Cases
L1	Automated Decision Engine	Standard rule-compliant cases	Low risk, complete evidence, no exceptions
L2	Credit Analyst	Moderate risk/manual review	Medium risk, warnings, evidence mismatch
L3	Senior Underwriter	High-risk/complex cases	High risk, significant exceptions
L4	Credit Risk Manager	Policy exceptions/material overrides	Exposure or exception beyond L3
L5	Credit Committee	Strategic/material exceptions	Large or exceptional exposures

4. Non-Delegable Escalations

- Material fraud concern.
- Unresolved KYC/compliance issue.
- Policy override outside configured authority.
- Model/data-quality failure affecting decision.
- Conflicting critical evidence.
- Any case explicitly designated committee-only.

5. Override Governance

- Override must identify original recommendation, new decision, reason, evidence and approver.
- Approver must have authority equal to or above the required exception level.
- Override cannot silently modify historical agent outputs.
- All overrides must be auditable.

6. Decision Routing Matrix

Condition	Route
Low risk + all checks pass	Automated/standard approval path
Medium risk	Credit Analyst / enhanced review
High risk	Senior Underwriter
Fraud high	Fraud/Compliance investigation
KYC unresolved	KYC/Compliance review
Policy exception	Authority based on exception level
Model failure	Manual underwriting

7. SLA & Queue Management

- Cases should have priority, age, owner and next action.
- High-severity fraud/compliance cases receive priority according to operational policy.
- Stale manual-review cases must escalate to queue supervisors.
- Every queue transition should be recorded.
