

UNDERWRITING OPERATIONS STANDARD

OPERATING PROCEDURE

Credit Underwriter AI | Enterprise Portfolio Knowledge Base

Document ID	CUAI-SOP-001
Version	1.0
Classification	Internal Use Only
Effective Date	01 August 2026
Owner	Underwriting Operations
Review Cycle	Annual or on material change

1. Purpose

Define the operational sequence for processing applications through the Credit Underwriter AI platform, including agent orchestration, human review, exceptions, audit and notification.

2. Scope

This fictional internal policy is designed for the Credit Underwriter AI portfolio project. It supports automated underwriting, human review, auditability and policy-aware AI explanations. It is not a policy of any real financial institution.

3. End-to-End Workflow

- Application creation and intake.
- Document inventory and completeness check.
- OCR extraction and normalization.
- Document verification.
- Income and bank-statement verification.
- Credit-risk scoring.
- Fraud detection.
- Policy compliance evaluation.
- Loan decision recommendation.
- Underwriting audit.
- Notification and next-step generation.
- AI Copilot explanation and evidence retrieval.

4. Agent Handoff Contract

Stage	Primary Agent	Required Output	Failure Handling
Intake	Document Intake	Completeness/status	Manual Review
Extraction	OCR Extraction	Structured fields + confidence	Reprocess/manual
Verification	Document Verification	Verified/failed + reasons	Manual Review
Income	Income Verification	Income status + evidence	Manual Review
Risk	Credit Risk	Score/category/probability	Fallback/manual
Fraud	Fraud Detection	Score/category/alerts	Compliance escalation
Compliance	Policy Compliance	Pass/warning/fail	Manual Review
Decision	Loan Decision	Approve/reject/manual	Authority routing
Audit	Underwriting Audit	Audit status/findings	Block/Review
Notification	Notification	Status/next step	Retry/manual
Copilot	AI Copilot	Explanation + evidence	LLM retry/fallback

5. Manual Review Procedure

- Review the triggering reason code first.
- Verify source documents and evidence.
- Compare conflicting values and obtain additional evidence if needed.
- Assess policy and risk implications.
- Record disposition, rationale and reviewer identity.
- Route to the correct approval authority.
- Close or escalate the case.

6. Exception Procedure

- Create exception record.
- Classify exception severity.
- Attach supporting evidence.
- Route to authorized owner.
- Record decision and expiry/conditions if applicable.
- Ensure downstream agents and audit record reflect the approved exception.

7. Operational Controls

- No critical agent failure should be silently treated as success.
- Partial workflow results must carry explicit status.
- Retries must be bounded and observable.
- Every workflow execution should have correlation/application identifiers.
- Sensitive data must not be placed into logs unnecessarily.

8. Copilot SOP

- Retrieve relevant policy evidence.
- Provide application-specific structured context.
- Generate explanation without altering agent outcomes.
- Expose evidence count/source metadata.
- Escalate unanswered policy questions rather than inventing a rule.

Document Control

Version	Date	Change
1.0	01 August 2026	Initial enterprise-style portfolio knowledge-base document

Important Disclaimer

All numeric thresholds, approval limits, scoring bands and operating procedures in these internal documents are illustrative project controls. They must not be presented as universal regulatory requirements. Regulatory content is maintained separately in the RBI Guidelines document and should be refreshed from authoritative RBI sources before any real-world use.
